## Objective and Goals For Attending EDP

I would like to develop my knowledge and skills in a further stage as a company executive. I believe that attending this course will help me to enhance my qualification and for my company to become a leader in the industry.

At the same time, I would like to help our society by providing accessible knowledge and improving education system for the future generation of Thai children. I believe all kids have equal right to learn and study at the best quality of education available. As a result, this will not only develop each kid as an individual but also improve the society as a whole when they grow up.

As the assistant to Khun Suchat, I have seen him dedicate himself to EDP especially to the Foundation and the education. I have several chances to meet with valuable people from EDP; interacting with them makes me learn the power of EDP through their lives.

I think that I can share my past experience with them - to learn and grow together.
